

# HAND SOAP

## CONCENTRATED HAND SOAP

This product is designed to wash away dirt and bacteria, and is gentle enough to be used on your entire body. **HAND SOAP** is a blend of synthetic surfactants and a unique ingredient which acts as a preservative and has emollient qualities of lanolin, leaving skin soft and moist. While not an antimicrobial, the preservative eliminates random contamination of the solution so that it will not be the source of microbial contamination. This product is for use as a hand and body soap and can be used as a shampoo. It can be used as a refill for a variety of dispensers.

**DIRECTIONS:** Simply apply to hands and lather vigorously, rinse and repeat if necessary.

**PRACTICAL TREATMENT:** Avoid contact with eyes, if eye contact occurs, flush with water.
